United Grinding Technologies

Our Liquid Tool. Your Success.

For combined EDM and grinding of hard and super hard materials.

Blasogrind GTE 5

- High removal rate with hard and super hard materials such as PCD, CBN, ceramic cermet and tungsten carbide
- Excellent surface quality
- Minimized cobalt leaching
- Minimal mist and vapor formation for a pleasant work environment
- Colorless and transparent for a clear view of the spark condition
- GTL-based oil for long-term oxidation stability and good machine compatibility

For all major EDM grinding systems

- Low viscosity and high flashpoint ensure optimal spark gap, minimized electrode wear and high stock removal also with fine grid wheels
- Ultra-fast air release creates an optimal ionized channel and dielectric strength

Grinding machines equipped with Studer WireDress

Anca EDG: PCD rotary eroding and carbide tool grinding in one

Agathon grinding machines equipped with PowerGrind technology

Product data

| | |
|--------------------|----------------------|
| Viscosity at 40 °C | 5 mm ² /s |
| Flash point | 155 °C |
| Copper corrosivity | 1a (3h at 60 °C) |
| Color | Colorless (ASTM 0.5) |

Note: Suitable for edge and precoat filter.

Test us. It's worth it.
